

1. Job:
 - MS/PhD grad student at UNH - small mammal dynamics
2. Cover Letter:
 - “I look forward to explaining this skill set...”
 - felt a little awkward. I think you could drop this sentence.
3. Resume:
 - While you absolutely should have a resume/CV ready to hand out, it is always a good idea to target it towards the specific job. Did you do that with this position? If not, dig through Dr. Rowe’s lab site and see if there are skills/experience of yours you can highlight that might match Dr. Rowe’s interests/needs for the position.
4. General thoughts:
 - You’re undergraduate background is very well suited to grad school. This looks like a good fit for your skills and experience. Overall a very strong application. Great job.
